## Attestation

I attest that the evidence package identified below was reviewed for internal consistency, traceability, and alignment with the declared project boundary. The review included file metadata, monitoring coordinates, water-level observations, vegetation counts, and the restoration activity register.

The reviewed records support the claim that peatland rewetting and native vegetation restoration activities are underway across the declared 250-hectare project area. No material contradiction was identified. Medium residual risk remains due to dry-season fire exposure and localized seedling mortality.

| Reviewed record        | Identifier            | Finding              |
|------------------------|-----------------------|----------------------|
| Audit report           | PP-AUDIT-Q2-2026      | Consistent           |
| Sensor dataset         | PP-SENSOR-Q2-2026     | Valid series         |
| GPS boundary           | PP-GEO-2026-001       | 250.0 ha declared    |
| Survival-rate report   | PP-VEG-Q2-2026        | 78.6% survival       |
| Drone survey composite | PP-DRONE-BLOCK-A-2026 | Demo visual accepted |
